Privacy Policy

1. Data Controller

The data controller for the processing described in this policy is BookmarkForge (contact in section 17). For the companion server and license infrastructure, the operator of that deployment acts as controller.

2. Introduction & Scope

BookmarkForge ("we", "our", or "us") is committed to protecting your privacy. This Privacy Policy explains how we handle your data when you use our application.

Key Principle: BookmarkForge runs 100% locally on your device. Your bookmarks, notes, documents, and AI conversations are stored in your browser's local database and are never transmitted to our servers.

3. Data We Do NOT Collect

We want to be clear about what we do **not** collect:

- **No bookmarks or URLs** are sent to our servers
- **No notes or documents** leave your device
- **No AI prompts or responses** are logged by us
- **No browsing history** is tracked
- **No personal information** is required to use the app
- **No analytics** are collected by default

4. Where Your Data Lives

All your data is stored locally in your browser using:

- **IndexedDB** - for bookmarks, documents, and settings
- **Secure Storage** - for encrypted keys and passwords

- **Service Worker Cache** - for offline functionality

Your data never leaves your device unless you explicitly:

- Export a backup file
- Share your vault with another device
- Use a cloud AI provider (your prompts go directly to the AI provider, not through us)

5. Encryption

Your data is encrypted using:

- **AES-GCM-256** encryption for all stored content
- **Argon2id** (memory-hard KDF) for password-derived keys
- Keys are derived and stored locally in your browser

We do not have access to your encryption keys or passwords.

6. Content Security Policy (CSP) Reports

BookmarkForge uses Content Security Policy (CSP) headers to prevent cross-site scripting and data injection attacks. If your browser blocks a resource because of these headers, it automatically sends a brief technical violation report to the same origin that served the application (the `/csp-report` endpoint). The operator's collector keeps only:

- The **origin** of the blocked resource (path, query and fragment are stripped; never your personal data)
- The CSP directive that was violated
- The origin of the page where the violation occurred
- A one-way salted hash of your IP address, used solely for rate limiting -- your IP is never stored

This is standard browser behavior mandated by the CSP specification (the `report-uri` / `Reporting-Endpoints` headers): the browser sends these reports on its own, without any per-user opt-in, because they are part of the security machinery that protects you. No cookies, identifiers or browsing history are attached, and no vault content is ever included.

7. AI Providers

When you use AI features:

- **Local AI (WebLLM):** Runs entirely in your browser. No data leaves your device.

- **Cloud AI (Gemini, OpenAI, Anthropic, etc.):** Your prompts are sent directly to the provider. We do not intercept, store, or log these requests. Each provider has its own privacy policy.

8. Optional Error Reporting (Opt-In Only)

You may choose to enable error reporting in Settings. If enabled:

- We receive anonymous technical error logs when the app crashes
- **We NEVER receive:** your bookmarks, text, URLs, prompts, or any personal content
- Only technical stack traces and device information are sent
- You can disable this at any time

9. PWA Bookmarklet & Share Target

BookmarkForge offers two ways to save content from your browser:

- **Bookmarklet:** Drag the "Save to Forge" button to your bookmarks bar. Click it on any page to save instantly.
- **PWA Share Target:** On mobile, use your browser's native Share menu to send links to BookmarkForge.

Both methods only send the URL and page title to the app when you explicitly trigger them. No browsing activity is tracked.

10. Third-Party Services

We use the following third-party services:

- **Google Fonts** - for typography (fonts are cached locally)
- **AI Providers** - Google, OpenAI, Anthropic, etc. (only if you configure them)

11. Your Rights (GDPR / RGPD)

BookmarkForge is designed so that **we never receive your personal data**, which means most GDPR obligations fall away by design. Under the General Data Protection Regulation (GDPR), you retain the following rights:

- **Right of access (Art. 15):** All your data is on your device. Use the Export feature to obtain a complete, machine-readable copy at any time.
- **Right to rectification (Art. 16):** Edit your bookmarks, notes, and documents directly in the app.

- **Right to erasure (Art. 17):** Use the built-in data removal (Settings -> Danger Zone / Nuclear Forget). This permanently deletes all local data, including encrypted keys and recovery data. We hold no copy.
- **Right to data portability (Art. 20):** Exports are open formats (JSON, Markdown, HTML) usable in other applications.
- **Right to object and restrict processing (Arts. 18/21):** All optional processing (cloud AI, telemetry, error reporting) is strictly opt-in and can be disabled at any time in Settings.
- **Right to withdraw consent (Art. 7):** Disabling optional features in Settings withdraws consent immediately and stops all associated processing.

To exercise any right that requires our involvement (e.g. a complaint about server-side processing), contact us at the email in section 17. You also have the right to lodge a complaint with your national data protection authority.

12. Lawful Basis & Processing Register

Under GDPR Article 6, we document the lawful basis for every processing activity that involves any data leaving your device:

Processing activity	Data involved	Lawful basis	Retention
Cloud AI (direct browser-to-provider)	Your prompts, sent directly to the provider you selected	Consent (Art. 6(1)(a)) -- opt-in per provider in Settings	Not stored by us; provider policies apply
Pro license validation (Whop adapter)	License key, instance/device identifier, IP for rate limiting	Contract (Art. 6(1)(b)) -- required to deliver the paid feature	Entitlement state while the license is active; rate-limit windows <= 1 hour
CSP violation reports	Blocked resource <i>origin</i> , violated directive, page origin, salted one-way IP hash for rate limiting	Legitimate interest (Art. 6(1)(f)) -- browser-mandated security reporting; see Section 6	Bounded in-memory ring (<= 200 reports) or JSONL file you host
Opt-in business analytics (only if you accept it in the consent banner)	Daily aggregated counts of a fixed list of event types, plus a SHA-256 hash of a random per-install id; no content, URLs, titles or timestamps	Consent (Art. 6(1)(a)) -- off by default	<= 180 days of daily totals; <= 200,000 installs of bounded per-install state
Client degradation events (only if you opt in)	Anonymized technical error class, hashed IP with per-deployment salt	Consent (Art. 6(1)(a))	Bounded ring (<= 200 events),

Processing activity	Data involved	Lawful basis	Retention
			aggregation window ≤ 10 minutes
P2P sync signaling	Peer connection metadata (SDP/ICE), ephemeral room secret	Contract (Art. 6(1)(b)) -- you initiated the sync	Connection lifetime only; no persistence after disconnect

Everything else -- your bookmarks, notes, documents, passwords, encryption keys, analytics events -- is processed **exclusively on your device under your control**, and is therefore outside the scope of GDPR processing by us.

13. Third-Party Processors & Data Transfers

When you use optional features, data may be processed by the following third parties (sub-processors). Each transfer happens only when you explicitly use the feature:

- **Google (Gemini API)** -- cloud AI prompts and generated media. Processes data in Google Cloud (global regions, data residency configurable by Google; see Google's Gemini API terms). Transfers outside the EU may occur under Google's Standard Contractual Clauses.
- **OpenAI / Anthropic / Groq / OpenRouter / Hugging Face** -- alternative cloud AI providers, only if you configure them. Their respective terms and SCCs apply.
- **Whop** -- Pro license payment and entitlement verification. Receives your license key and payment details when you purchase Pro. Whop acts as an independent controller for payment data.
- **Sentry (Functional Software)** -- optional error reporting, only if you enable it in Settings and the operator has configured a diagnostic endpoint. Receives redacted technical stack traces (URLs without query strings, secrets removed, no user identity). Sentry acts as a processor under its Data Processing Agreement; see Sentry's privacy policy for international transfers.

We do **not** sell, rent, or share your data for advertising. We do not use tracking cookies or third-party analytics scripts. Cloud providers are bound by their own GDPR-compliant data processing agreements; we recommend reviewing them before enabling cloud AI.

International transfers: when a provider processes data outside the EEA, transfers rely on the provider's EU adequacy decision or Standard Contractual Clauses. Local-only use of BookmarkForge involves no international transfer at all.

14. Record of Processing Activities (ROPA summary)

A summarized record of processing activities (GDPR Art. 30) is maintained covering: purposes, categories of data subjects (app users, paying customers), categories of personal data (license keys, hashed IPs, opt-in technical reports), recipients (the processors above), retention limits, and security

measures (client-side AES-256-GCM encryption, TLS 1.3 in transit, HMAC-signed signaling, rate limiting).

15. Children's Privacy

BookmarkForge is not designed for children under 13 (or the equivalent minimum age in your jurisdiction). We do not knowingly collect any personal information from anyone.

16. Changes to This Policy

We may update this Privacy Policy from time to time. Material changes will be reflected in the "Last Updated" date above and, for breaking changes affecting processing, announced in-app before they take effect.

17. Contact

For privacy questions, data subject requests, or concerns:

- Email: bookmarkforge@proton.me
